# Android Tablet Developer for robotic project

(full-time / part-time / student job)

If you are an energetic, curious developer, not afraid of challenges and possess an innovative spirit, we have an exciting opportunity for you. We are opening Android Developer positions and looking for new colleagues to join our Prague team.

About us

We are a newly founded company developing our own robotic solution (based on the 7-DOF manipulator arm), ambitiously targeting the commercial market. Our aim is to create a comprehensive, next-generation robotic system with a focus on user comfort and an efficient task programming interface.

Your tasks will be

- To develop and enhance various parts of the tablet interface application responsible for the user interaction and communication between the higher and lower robot system layers
- To participate on UX design challenges related to special use cases within the area of robotics and automation

Required

- Java and Android mobile/tablet app development experience
- Passion and ability to pick up new and existing technologies in a short period of time

Advantage

- C/C++, Python, Linux
- Communication frameworks, RPC, XMLRPC
- Any awareness or overview in the domain of the theory of robotics

What we offer

- Attractive salary
- Flexible working hours, occasional home office
- Interesting technological project and very unique opportunity to participate on the complex solution in the robotic domain, even to face many interesting technological, theoretical, design and UX challenges
- Inspiring office location and open freelance culture (ImpactHUB Prague), social networking opportunities related to whole ImpactHUB community
